From Darkness to Light

We are delighted to share with you the annual report for the year 2023-24.

As we reflect on the year 2023-24, Sankalp India Foundation stands proud of the progress we've made in empowering lives, fostering hope, and addressing critical healthcare needs, despite the challenges we faced.

The Sankalp Child Care Home completed our cure program in Bangalore. With this facility, we could confidently increase transplant admissions, knowing that each child would have a safe and supportive environment to recover. The Child Care Home also became a hub for interaction, where children and the community came together. The thoughtfully designed facility, fully equipped to support recovery, was filled with activities throughout the year, bringing volunteers from our partner organizations closer to the children and their mothers. With laughter and smiles echoing in the halls, we were able to expand our transplant program with greater confidence.

The Sankalp Thalassemia Day Care centre was another long-awaited addition, bringing together everything needed to provide children with the best care. It quickly became a vibrant space, full of children battling serious medical conditions, and a dedicated team that cared for them with compassion and positivity. The success of the Thalassemia Day Care inspired us to consider expanding our reach, and once the Sankalp Blood Centre began

supporting our efforts, we were able to pursue our goal of setting up additional Thalassemia Day Care centres.

A standout achievement of the year was the success of our prevention program, which grew exponentially. Starting with just five centres at the beginning of the year, we expanded to 44 centres within one year, screening pregnant women across multiple states to reduce the incidence of hemoglobinopathies. Our expansion took us through Maharashtra, Madhya Pradesh, and Gujarat, building momentum and strength for the program.

In parallel, our laboratory focused exclusively on hemoglobinopathies, enhancing our expertise and skills in this area. The prevention program scaled alongside innovative diagnostics, achieving the right balance of cost-consciousness and high-quality service, maximizing value for our community—just as we had done for the cure and management programs.

As Sankalp continued to grow throughout 2023-24, the coming together of families, volunteers, associates, donors, and the broader community has made the impossible possible. Every step has brought us closer to realizing our vision.

While we celebrate our successes, the real question ahead is: how can we scale these efforts to bring the same relief—and even more—to more children? After all, every child deserves a better chance at life.

Thank you for being part of this journey.

Vande Mataram

Emergency Wing and Blood Helpline

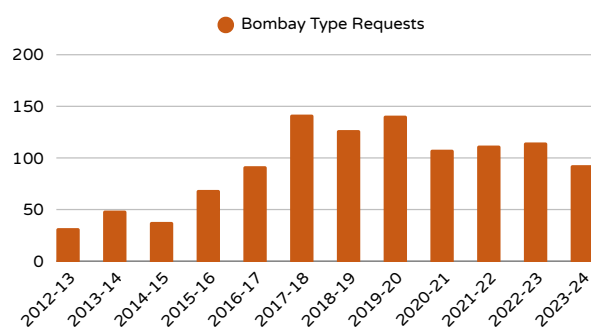

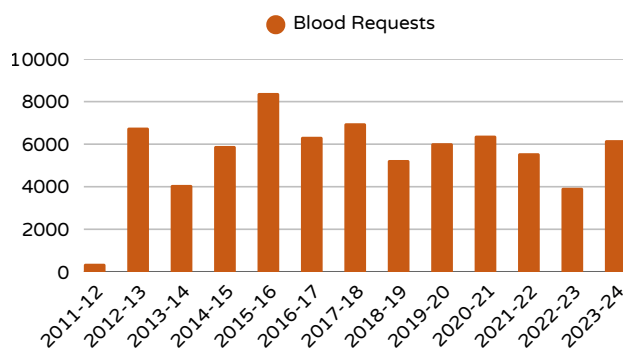

We seek to ensure that nobody suffers because of shortage of blood.

India is known to have far too many blood centers. Yet, even today, it is common to find people looking for blood. This is in spite of the fact that a large portion of blood comes from voluntary blood donors in outdoor drives. Knowing where the needed blood units are available continues to be a challenge.

Besides being burdened to find blood, many patient families struggle to make sense of

the complex blood requests for modern blood components. The situation is particularly difficult for families who have very specific and rare blood requirements for their patients. The management of rare blood types is a subject requiring complex planning, networking, and logistical capabilities.

Emergency Wing and Blood Helpline is a team which has built the capacity and capability to fill these gaps and ensure that no one suffers because of blood.

Sankalp Blood Centre

A project of Sankalp India Foundation in association with Jai Shivshakti Health and Educational Foundation and Karnataka Marwari Youth Federation.

Sankalp Blood Centre, an initiative of Sankalp India Foundation, is committed to tackling the critical blood shortage in India, particularly for thalassemia patients who depend on regular transfusions. The centre provides free, timely, and high-quality blood to patients nationwide through a network of Prevention, Management, and Cure Centres.

With regular blood donation drives and a mobile blood collection unit, we ensure

wider access to blood. Our mission is to make blood available to all who need it. Thanks to our dedicated partners and supporters, we ensure that no patient is required to provide replacement blood units.

The Sankalp Blood Center commenced its operations in July 2023, marking the beginning of a new chapter in its journey of service and care.

Rakta Kranti -The Blood Revolution

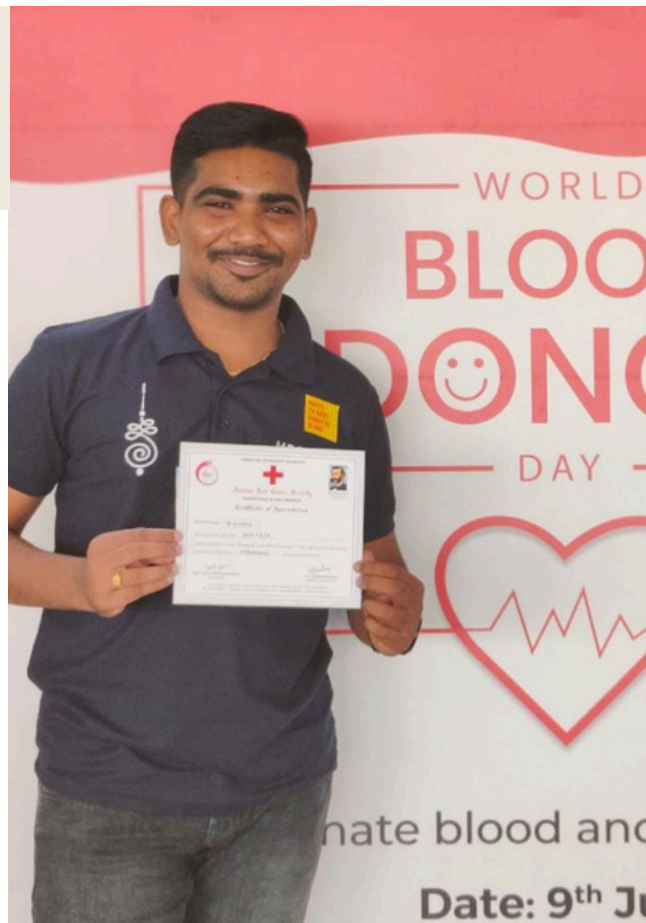

In spite of the advances made, our country continues to struggle to maintain stocks of voluntarily donated blood. The practice of replacement blood donation is highly prevalent. Not only does it impose immense pressure on the relatives of the patients, it is also a proven threat to blood safety.

Rakta Kranti aims at organizing efficient and well-organized blood donation drives with standards that are comparable to the best in the world. We bring to the donor all the information relating to blood donation that makes him/her comfortable and confident about the process.

At Rakta Kranti, Sankalp has a very dedicated and self-motivated team, which is constantly working hard to reach out to people and disseminate knowledge and goodness of voluntary blood donation.

MISSION: NO SUFFERING BECAUSE OF SHORTAGE OF BLOOD

VISION: We seek to achieve 100% voluntary blood donation.

What we do?

CAMPS WHEN NEEDED THE MOST
65-70% collection happens in Apr-Jul and Nov-Feb

END TO END CAMP MANAGEMENT
Publicity and awareness creation, donor motivation, blood bank selection, drive execution, feedback and review.

STRONG PUBLICITY CAMPAIGN
Multi-pronged approach - mailers, posters, brochures, floor talk, banners; use in house volunteers wherever possible

FOCUS ON QUALITY
Emphasis on adherence to national & international guidelines; Non compliance is measured, debated and acted upon.

CAREFUL PLANNING
150 units per blood bank; Need based distribution

PERSONNEL TRAINING
Drive managed by trained SIF personnel; Investment on Blood bank staff training done

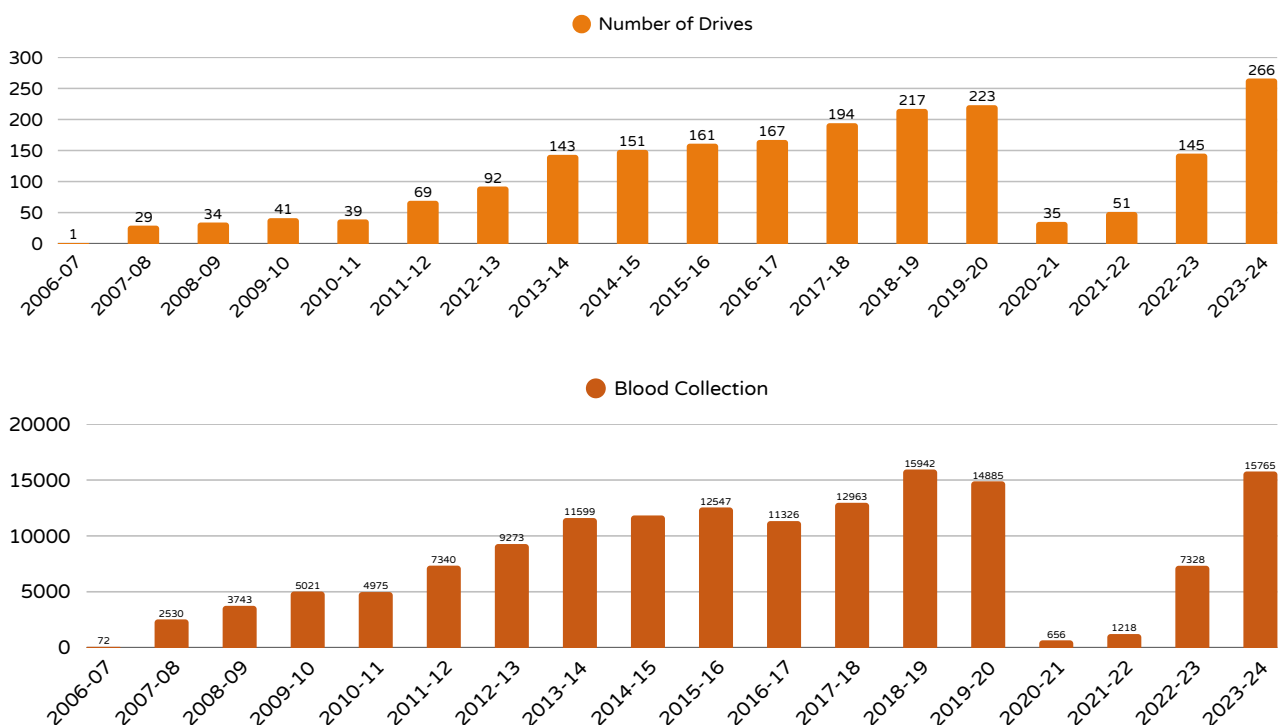

TECHNOLOGY BACKBONE
Data for each drive is in electronic means; Collection, complication, deferral, compliance is measured and analyzed.

POLICY MAKING
Standards on complication prevention, management created. Standards for donor selection and deferrals now available.

33 MULTI CITY DRIVES WERE ORGANISED WITH A COLLECTION OF
1399 UNITS OF BLOOD

Thalassemia Care and Management

Thalassemia is a blood disorder in which the patient's body does not produce healthy red blood cells. These patients need blood transfusions every few weeks throughout their life to survive. Most children born with this disorder never get access to proper treatment. Even within those who get some form of treatment, 50% die by the age of 26 years.

Thalassemia Care is often fragmented and is reactive in nature rather than proactive. This system contributes to avoidable suffering, financial depletion, and emotional stress.

With proper care and management, these patients can hope to have a near-normal life.

VISION: We seek to ensure that each thalassemia patient should receive appropriate and adequate care and management irrespective of their financial status with the goal of restoring normalcy in their life.

Our Centres

Thalassemia Cure

MISSION: THALASSEMIA FREE INDIA

VISION: We seek to provide high quality patient focused curative option to children suffering from Thalassemia irrespective of financial background with focus on technology and transparency.

Sankalp Program for Thalassemia Cure offers Bone Marrow Transplant - the permanent cure to the children suffering from Thalassemia and other non-malignant blood disorders.

The organisation enables reliable transplants on a non-profit basis to the most appropriate candidates irrespective of their financial status. At the cost equivalent to 4-5 years of thalassemia management, the organisation offers a complete cure.

The organisation has brought together experts who have vast experience with BMT for thalassemia. Sankalp has established a program that ensures systematic preparation of the chosen kids for transplant and their long-term follow-up – further enhancing the outcome.

What we do

With the guidance of Dr Lawrence Faulkner from Cure2Children Foundation, Italy we setup a BMT centre for our own children at Bangalore in 2015. While this was based in another hospital, all the working decisions for this centre were with team Sankalp.

Our journey towards cure started specially empowered with state-of-the-art technology. Very quickly we were able to identify what came in the way and what enabled good outcome and rapidly improved the care. Consequently we grew in terms of number of transplants but also in terms of the outcomes.

With many patients waiting, we first started one more centre in Ahmedabad in 2017. In 2020 we moved to a larger and highly equipped facility in Bangalore – increasing number of beds available for transplantation to 14.

Hemoglobinopathies Prevention

With colossal efforts, we are alleviating suffering from thalassemia and sickle cell disease. Society is coming together is helping cure a couple of hundred children each year.

We continue to witness tens of thousands of affected births each year. Thalassemia and sickle cell disease are preventable. Can we prevent this unnecessary suffering?

MISSION: THALASSEMIA and SICKLE FREE INDIA
VISION: Every couple at risk of giving birth to a child who is affected by hemoglobinopathies must have an option to make an informed choice.

Highlights

- Program shows that when given a choice, 7 of 10 couples opted for prevention.
- For every 787 families enrolled, we were able to prevent 1 birth.
- Cost per family enrolled is ~Rs. 550 (USD 6.5) covering all associated expenses

IN 2023 - 24

31

AFFECTED
BIRTHS
PREVENTED

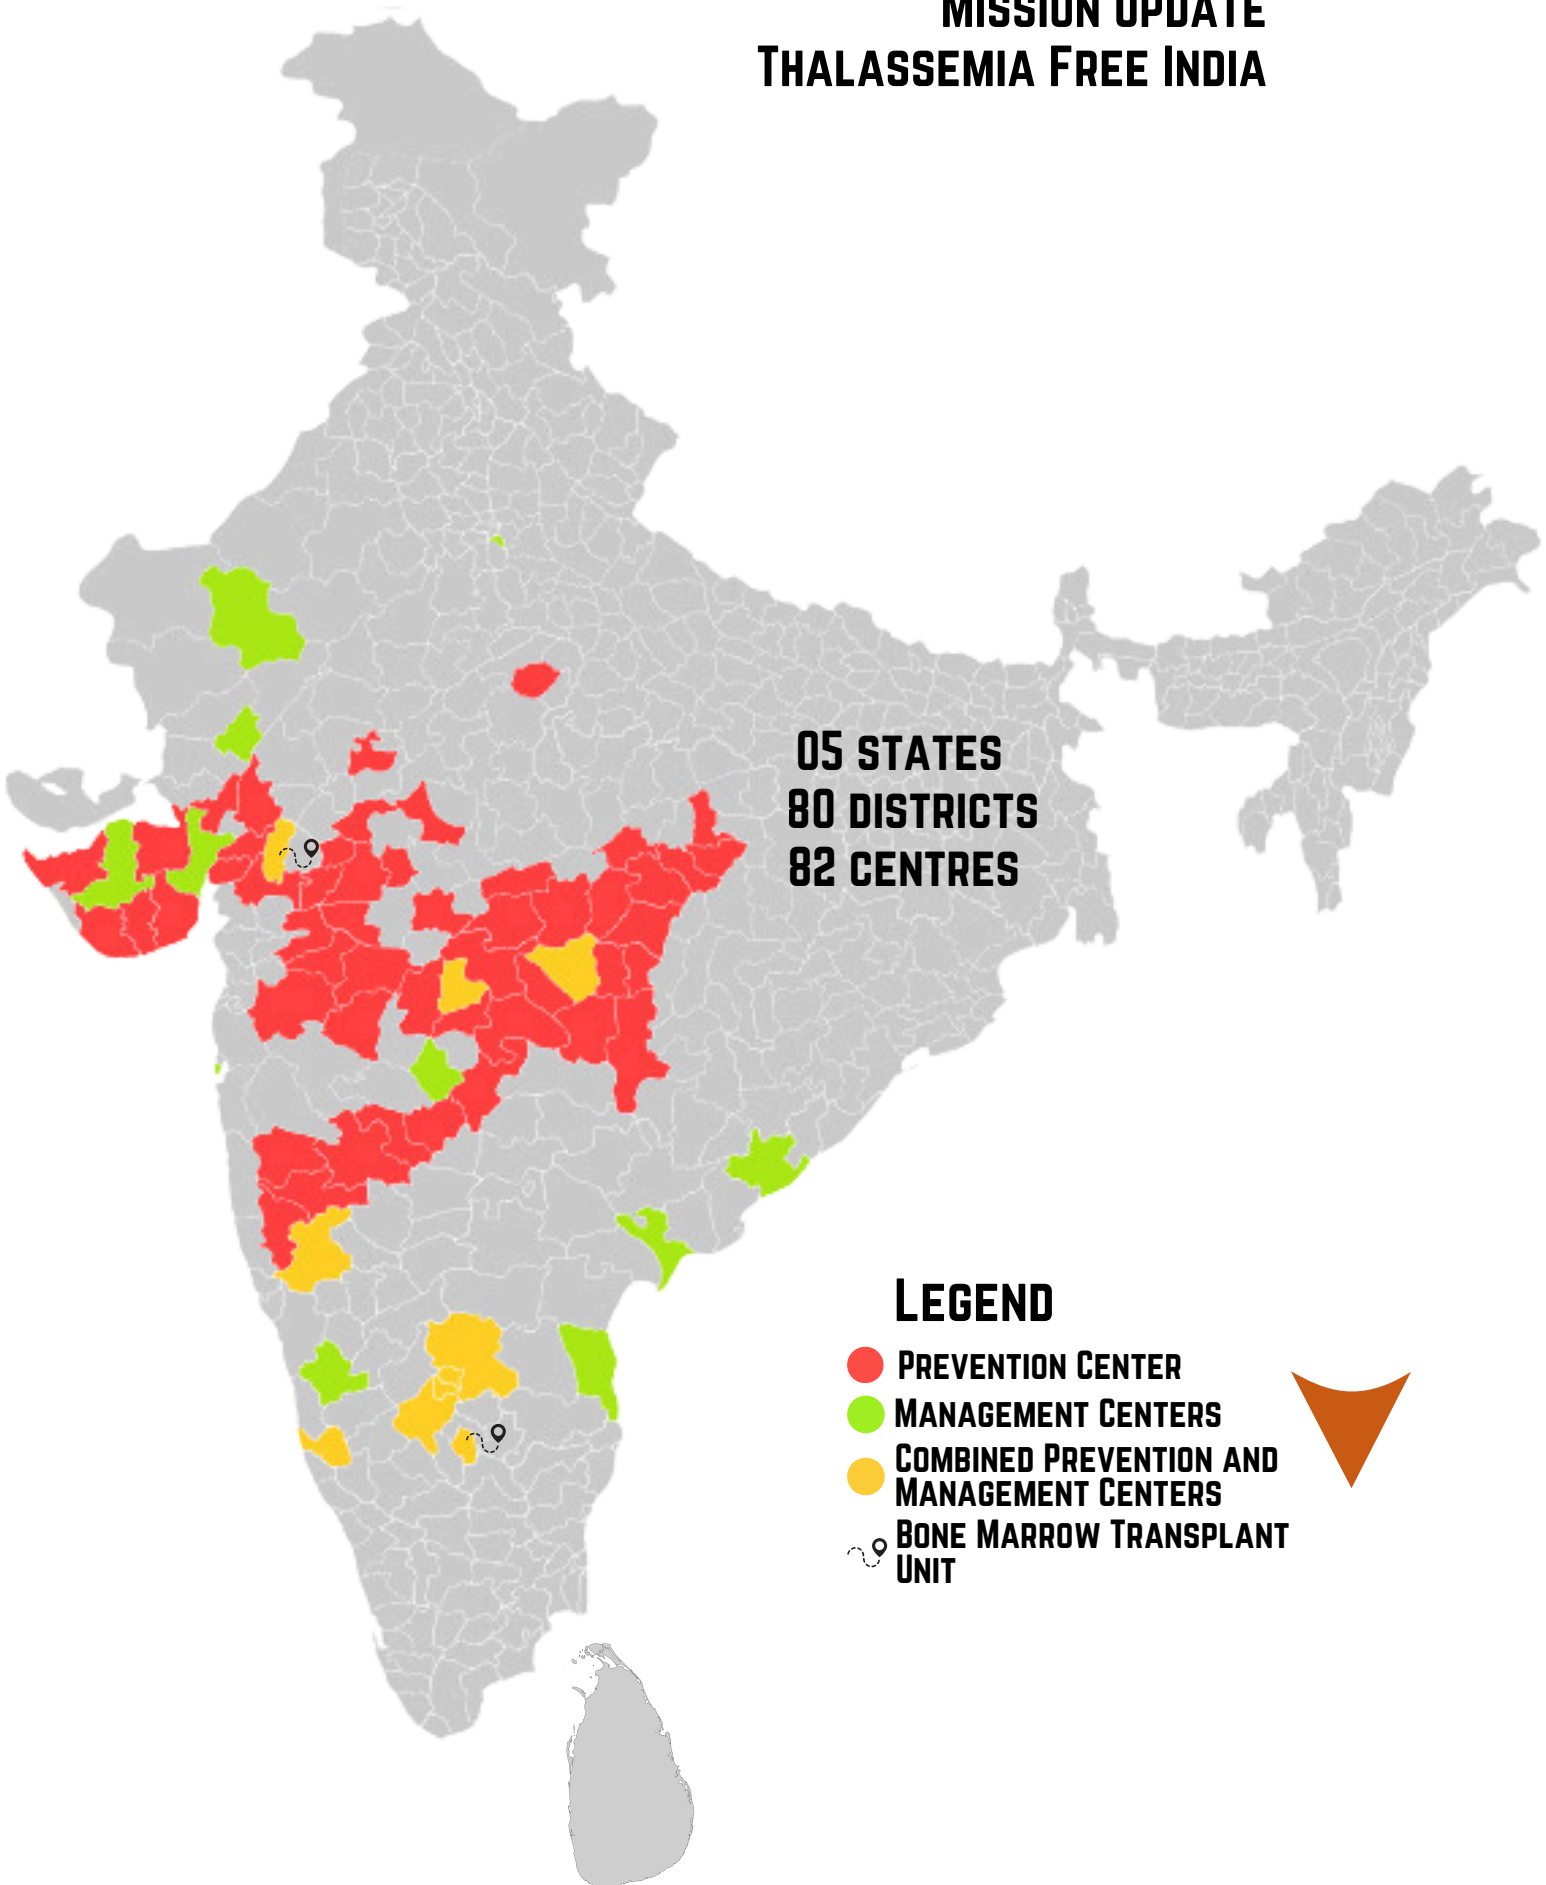

It's reported that 11,000 new patients are born with thalassemia alone each year in India and 90% of them do not get access to life-saving treatment. Screening for hemoglobinopathies is not routinely performed in India. Inadequacy of prevention approach is seen in the birth of more children with the disorders in the families who have a known patient.

The StopThalassemia campaign is an initiative of Sankalp India Foundation to strengthen Thalassemia prevention by focusing on antenatal screening. The campaign provides screening services to pregnant women and their husbands in the first trimester of their pregnancy. The campaign has been offering antenatal screening at Lady Goschen Hospital – Mangalore, Rural Development Trust - Bathalapalli – Ananthpur and District Hospital – Tumkur.

In addition to the population-based targetted screening approach, Sankalp India Foundation supports all subsequent births in the families of the patients receiving treatment at its Thalassemia Care Centres providing support at each step.

MISSION UPDATE THALASSEMIA FREE INDIA

Sankalp Labs

Sankalp Labs is an initiative by Sankalp India Foundation that focuses on providing critical diagnostic and medical support to the patients that the organization serves. The core purpose of Sankalp Labs is to offer accessible, affordable, and high-quality medical testing and diagnostics, ensuring that individuals receive the tests they need for better diagnosis and treatment.

The laboratory serves the diagnostic needs of all Sankalp Prevention, Management, and Cure Centres, supporting the foundation's efforts in comprehensive healthcare. Samples from across the country are sent to the centralized laboratory in Bangalore, where they are processed and analyzed to ensure timely and accurate results that directly contribute to patient care

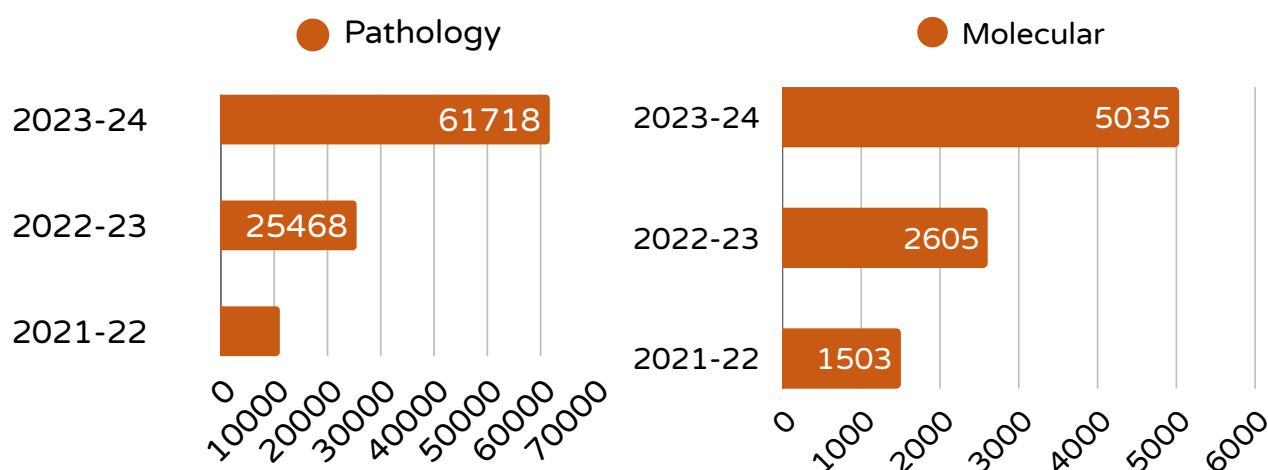

What kept us busy

Comprehensive thalassemia mutation analysis workflow has been setup which uses a variety of molecular techniques. This has resulted in identification of nearly 40 beta-thalassemia causative mutations.

We are intensifying efforts to control Antimicrobial Resistance. Work is ongoing for molecular detection of microbes seen in our patients. Microbiology lab has also expanded to include blood cultures.

We are employing technology, Agile - a program management approach and adaptive multi-modal logistics to scale the lab services while optimizing resources and enhancing quality.

The Next Steps

Reinvent mutation testing

Mutation testing for hemoglobinopathies is taking 7 days and fetal testing 13 days. Can we reduce this significantly?

SCALE hemoglobinopathy Screening

Program for prevention is scaling. From 200-250 samples per day this year, can we increase capacity to 600+ samples per day?

Volunteering through Smile and Emotions:

At Sankalp, we've witnessed the transformative power of volunteering. Individuals, groups, and institutions come together to spend quality time with our children, imparting valuable lessons and creating unforgettable memories.

These volunteering events go beyond mere interaction; they offer a unique opportunity for participants to grasp the significance of blood donation. Through guided tours of our blood bank and daycare facilities, volunteers gain insight into the blood transfusion process and its effects.

Moreover, they acquire knowledge about Thalassemia, sickle cell diseases, and their management, cure, and prevention. Engaging activities, such as storytelling, dance, music, and math, not only delight the children but also instill confidence and positivity.

The impact of these events is profound. Many first-time blood donors are inspired to donate fearlessly, pledging to become regular donors. As volunteers depart, they carry with them a sense of gratitude and a heartfelt smile – a testament to the enduring power of compassion and connection.

Our Donors

A Heartfelt Note of Gratitude

We extend our deepest thanks to our generous donors, whose unwavering support plays a crucial role in furthering our mission. Your contributions empower us to make a meaningful difference in the lives of those we serve. It is through your kindness and dedication that we can continue our work, bringing hope and positive change to many.
